

Nested Namespaces

What

- › The namespace which is declared inside another namespace is called as "Nested namespace" or "Inner Namespace".

Goal

- › Use nested namespaces, in order to divide the classes of a larger namespace, into smaller groups.

Accessing types

- › Syntax:
OuterNamespace.InnerNamespace.TypeName

Nested Namespaces

```
namespace OuterNamespace
{
    Classes
    Interfaces
    Structures
    Delegate Types
    Enumerations

    namespace InnerNamespace
    {
        Classes
        Interfaces
        Structures
        Delegate Types
        Enumerations
    }
}
```
