

# 'using' Declaration

## What

- › You can prefix "using" keyword before the local variable declaration, in order to call "Dispose" method when that variable goes out of scope.
- › New feature introduced in C# 8.0

## How

### Creating object

```
public void Method()  
{  
    using ClassName referenceVariable = new ClassName();  
  
    //do work here  
  
} //Dispose will be called automatically here
```
